Verify the length of the shower curtain required per application and the height each rod is to be mounted at. Place shower rod flanges against mounting surface and transfer mounting points to wall surface. Drill pilot holes and secure one flange with proper fasteners. Insert shower rod into mounted flange, slide other flange on rod and secure to opposite wall. Snap the shower curtain hooks over the rod (Recommend UX169 hooks) and secure curtain to hooks. (Note: See tech data sheet for shower curtains)

***NOTE:** It is recommended rods over 72" be equipped with an overhead support.

APPLICATION:

To provide stainless steel shower curtain rods in various lengths and various styles of mounting flanges.
